Dynamic Antisymmetry

By Professor Andrea Moro

MIT Press Ltd, United States, 2001. Paperback. Book Condition: New. New.. 227 x 153 mm. Language: English . Brand New Book. The central idea of Dynamic Antisymmetry is that movement and phrase structure are not independent properties of grammar; more specifically, that movement is triggered by the geometry of phrase structure. Assuming a minimalist framework, movement is traced back to the necessity for natural language to organize words in linear order at the interface with the perceptual-articulatory module. Andrea Moro uses this innovative perspective to analyze several empirical domains, focusing on small clauses, split wh-movement, and clitic constructions. In a final speculative chapter, he examines the general consequences for the design of grammar implied by Dynamic Antisymmetry. The book is self-contained, with a synopsis of current theories of movement and a synthetic presentation of the theory of antisymmetry. An appendix presents the essentials of a unified theory of copular sentences, which plays a central role in the argument and has several important consequences for syntax, for example, for expletives and locality. Linguistic Inquiry Monograph No. 38.
