Legend Press Ltd, United Kingdom, 2013. Paperback. Book Condition: New. 292 x 214 mm. Language: English . Brand New Book ***** Print on Demand *****.This to a published scientific article advertised on this website, known as G-500: The Twelve Forces of Movement. It describes in detail through a series of pictures and diagrams, the importance of movement as a constant force in mechanics and dynamics, how movement uses momentum and motion to interact with bodies and objects, how they are formed into various shapes and patterns, and how they can become independent and mobile from movement. The article utilises gas giants like worlds similar to the outer planets in our very own solar system (e.g Jupiter, Neptune) in elaborate illustrations to represent the bodies and objects at work, explaining the principles involved. I have decided to use these types of planets in part to present the forces and reactions as an alternative to the typical and intimidating mathematical formulas and equations that are displayed in other such journals; the other reason is that gas giants are colourful metaphors to ease and entice the reader instead of the standard and sometimes common mono-coloured spheres, or basic symbols. This is done so that all people even with a vague interest in science, physics, and similar fields can understand it in a lucid manner, without feeling alienated, perplexed, or overwhelmed. It is also done to show the importance and significance this field has. On each page there are five planets; one is always labelled Movement and shown to be separate from the other planets that are pictured nearby. The others are labelled Momentum, Motion, and Mobile; this is to depict the reactions involved when Movement plays it role. At the bottom of every page is a rectangular caption which describes in words what...
