RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 62 pages. OCLC Number: (OCoLC)28692729 Subject: Agricultural biotechnology -- Bibliography. Excerpt: . . . f additional nodulation genes. Complementation experiments indicated that the DNA region to the left (3 side) of node is functionally homologous between *R. leguminosarum* bv. *viciae* and *R. leguminosarum* bv. *trifolii*. In this DNA region, three nodulation genes were identified, *nodT*, *nodM* and *nodL*. *TnphoA* insertions in the *nodT* gene, about 4.5 kb to the left of *nodE*, lead to a delay in nodulation on *Trifolium subterraneum*, but not on *V. sativa* plants. *TnphoA* insertions in gene *nodM* have no detectable influence on nodulation. Finally, *TnphoA* insertions in the *nodL* gene affected nodulation so that only rarely nodules were induced on the inoculated plants. The nucleotide sequence of this gene is presented. On the basis of the sequence a membrane integrated protein is predicted with a molecular weight of 20.1 kDa. Microscopical analysis of the infection process by *nodL* mutants indicate a role for *nodL* in maintaining the stability of the infection thread. Experiments using transcriptional *lacZ* fusions suggest that *nodL* belongs to the same transcriptional unit as *nodF*, *E*. Very low...
